ACT VI · LEARNING

What /triage puts in front of you

```
id       where                   who      proposal  evidence
a1b2c3d  js/secretCode.js:196    copilot  rejected  added once, at start-up
e4f5a6b  js/assist.js:38         copilot  rejected  parse is in a try, value clamped

Apply all, or tell me which ids to change.

review-loop threads verdict --batch decisions.tsv
```

One table, grouped by proposal, each with a line of evidence you can check. All or nothing when it records.

An example built from two sweep hits earlier in this talk, not real threads. The two runs before this slide were real.
